INTRODUCTION

This is the second edition of the International Rhododendron Register to be published by the Royal Horticultural Society in its role as International Cultivar Registration Authority (ICRA) for the genus *Rhododendron*. The first edition, published in 1958, came just three years after the Society's initial appointment as ICRA by the International Society for Horticultural Science. Since then 40 Supplements have been produced by the Society. These were initially (1961-1986) included as an integral part of the *RHS Rhododendron and Camellia Year Book* but from 1987 onwards have been produced as independent publications.

Work on this second edition began in 1983. Initially the intention was merely to integrate all the published registration lists. However it soon became evident that a more extensive revision of the earlier entries would be required to bring nomenclature up-to-date, to make the format of entries consistent and to incorporate new data for many entries. Furthermore a considerable number of additional, unregistered uses of names had come to light and it was decided to include these as part of a new Checklist function for the work, integrated with the Register itself. This has now been done. Whilst this Register and Checklist is thus demonstrably a more comprehensive guide than its predecessor it must be acknowledged that coverage, both of past and present usage is still not complete and the Society would welcome the receipt of any new, revised or supplementary material. This Register and Checklist comprises over 28,000 entries for cultivar and Group epithets (including their synonyms) as well as the names of nearly 2000 individuals or firms that have played a role in the raising, naming, introduction or registration of these plants.

Scope of the Register and Checklist

This Register and Checklist incorporates a record of all epithets known to have been used for cultivars or Groups within the genus *Rhododendron* up to the end of December 2002. It thus covers all azaleas, azaleodendrons and vireya rhododendrons as well as what might be thought of as the 'core' of hardy rhododendrons. All epithets published in the 1958 Register as well as in the forty published Supplements are included, together with a very large number of additional uses of epithets that have come to light in the course of ongoing research. Neither common names, nor the botanical epithets of species are included as individual entries. Nor are trademarks included as such. On occasions a cultivar or Group epithet is included which is based on a published botanical epithet, but its appearance in the Register and Checklist indicates that, at some time at least, the entity it represents has been treated as a cultivar or Group.

Duplicated uses of epithets are each treated individually wherever they are known to have occurred. Whilst the registration system exists to try and prevent such duplications (and it has certainly helped to reduce their occurrence) no such voluntary scheme can hope to eradicate the practice of reuse entirely – and there is an historical reservoir of duplicated usages especially from the time in the nineteenth century when *Azalea* was treated as a separate genus. It will be of value to Rhododendron enthusiasts to have such multiple usages highlighted with as much information as possible provided to distinguish one usage from another. An element of judgement has had to be exercised in whether to interpret many early usages as duplications based on separate entities or merely the same plant described or referred to in a different way.

Nomenclature

Botanical nomenclature and classification followed in reporting on parentage and origin of the cultivars and Groups in this listing follows the *Rhododendron Handbook 1998* (RHS, 1997). This is based on the revision of the genus pioneered by David Chamberlain and James Cullen and published by the Royal Botanic Garden, Edinburgh during the last quarter of the 20th century. This revision, controversial in its time, now seems to have been widely accepted as the basis of most modern accounts of the genus, both in the wild and in cultivation.

The Register and Checklist deviates from the Edinburgh revision in only one significant case: the treatment of the uniquely popular and influential species *R. yakushimanum*. In the 1998 *Handbook* this taxon is treated as a subspecies of *R. degornianum* whereas for convenience and the sake of familiarity and brevity in the Register and Checklist it is retained as a species.

The use and spelling of botanical epithets follows the rules and recommendations of the *International Code of Botanical Nomenclature* (ICBN) (IAPT, 2000). The use of Latin-form cultivar and Group epithets and the use and formation of cultivar and Group epithets in languages other than Latin follow as far as possible the *International Code of Nomenclature for Cultivated Plants* – 1995 (ICNCP) (Quarterjack Publishing, 1995). (Note: the text of this Register & Checklist was completed prior to the publication of the subsequent (2004) edition of the Code. Some of the changes that would now be required as a result are noted in the relevant parts of this Introduction.)

Grex epithets

Following what has become general practice, the entries in the 1958 Register for grex epithets have here been treated as representing Groups. The term grex is now restricted for use in orchids alone.
Synonyms
In this Register and Checklist the word synonym (abbreviated as "syn.") has been used to represent a very broad concept and incorporates any epithet (or variant of an epithet) which is not the currently accepted one for that cultivar or Group. Thus later names for the same cultivar, misspellings, translations etc. may all be treated as synonyms. The development of a distinction between synonyms and trade designations as now set out in the latest International Code of Nomenclature for Cultivated Plants (ISHS, 2004) came too late to be systemically incorporated here.

Ordering of Entries
The Register and Checklist is presented in one integrated alphabetical listing. This strict alphabetical ordering initially ignores casing, accents, spaces or punctuation marks e.g. ‘A.B. Mitford’ lists after ‘Abessa’. When epithets differ only in whether the epithet is rendered as one, two or more words, the version with a multiple word epithet is listed first e.g. ‘Appleblossom’ lists after ‘Apple Blossom’.

When the same epithet has been used more than once their individual order is determined by the broad category to which the plant belongs so that they appear in the following order:
(a) azalea
(r) = rhododendron (excluding azaleas, azaleodendrons and vireyas)
(v) = vireya rhododendron
(az) = azaleodendron

Should this still leave duplicated entries the epithets are listed in date order.

Where a cultivar belongs to a Group and both share the same epithet then the two entries are printed together (the ordering process in this case ignoring the word Group).

Gender of epithets
When Azalea was recognised as a genus separate from Rhododendron latin form cultivar epithets of azaleas had to agree with feminine gender of Azalea. When the two are united under the neuter genus Rhododendron such latin form epithets have to change to reflect this. Thus in this Register and Checklist azalea cultivars originally published as ‘Alba’ and ‘Iveryana’ will now be found listed as ‘Album’ and ‘Iveryanum’. This can sometimes make a significant difference to their position in the alphabetical listing and should be borne in mind if an epithet appears at first to be missing from the Register and Checklist.

Transliteration of Japanese Epithets
It has not yet been possible to undertake a thorough and consistent revision of the transliterated versions of Japanese epithets to bring them into line with the ICNCP. The Code requires adherence to a modified Hepburn system of transliteration and to ensure accuracy in this regard the original Japanese characters need to be available. The rendition of many such epithets in the Register and Checklist must therefore be regarded as provisional until further work can be done. In general they have been reproduced here as found in the literature with some limited attempt to eradicate apparent inconsistencies in their format and spelling. (Note: the 2004 Code now treats the rendition of a nonalphabetic script into an alphabetic script as transcription, not transliteration.)

Interpretation of Individual Entries
Information on each entry in the Register and Checklist is presented in a consistent style, format and order. It may consist of all or some of the following:

(a) Category of plant. Each entry starts with an indication of a broad category to which that plant belongs i.e. azalea (a), azaleodendron (az), rhododendron (r) or vireya (v). The category rhododendron in this context refers to any plant that does not fall into any of the other three.

(b) Epithet. The cultivar or Group epithet is given in bold typeface. In nearly all cases words are spelt out in full and not abbreviated (even where such abbreviations are permitted). e.g. Doctor not Dr, Professor not Prof. The expanded form of an abbreviation may depend on the language in which the epithet was first established.

(c) Status. An indication of status is given using the following abbreviations:

<table>
<thead>
<tr>
<th>Abbreviation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>cv. = cultivar</td>
<td></td>
</tr>
<tr>
<td>gp = Group</td>
<td></td>
</tr>
</tbody>
</table>

All cultivar epithets are distinguished by being placed within single quotes. Entries in the 1958 Register which are designated as grex epithets are here treated as Groups.

(d) Subcategories. An indication is given of whether the plant concerned belongs to one of the following subcategories:-

<table>
<thead>
<tr>
<th>Subcategory</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Evergreen azalea</td>
<td></td>
</tr>
<tr>
<td>Deciduous azalea</td>
<td></td>
</tr>
<tr>
<td>Semi-evergreen azalea</td>
<td></td>
</tr>
<tr>
<td>Lepidote rhododendron</td>
<td></td>
</tr>
<tr>
<td>Elepidote rhododendron</td>
<td></td>
</tr>
<tr>
<td>Azaleodendron</td>
<td></td>
</tr>
<tr>
<td>Elepidote/Lepidote cross</td>
<td></td>
</tr>
</tbody>
</table>

(e) Parentage. When the direction of parentage is known the seed parent is given first and indicated by (s). The two parents are separated by a large multiplication sign (×). When an individual parent consists of a hybrid formula (i.e. it is not an individually named cultivar or Group) its parental elements are given separated by a small multiplication sign (×) e.g. ‘Rosa Belton’ × oldhamii (s) × prinophyllum in which the direction of the cross is known but the seed parent is an unnamed derivative of ‘Rosa Belton’ × oldhamii.
It is likely that most hybrids listed with *R. lochiae* as a parent are in fact hybrids of *R. viriosum*, the latter being the prevalent plant in cultivation before the two were distinguished.

In many cases where both a Group and a cultivar derived from it bear the same epithet it has been impossible to say with certainty in which sense the epithet has been used when given as part of a parentage. In such cases the Register and Checklist err on the side of caution in treating them all as representing the Group. It is likely, but by no means always the case, that where there is an awarded cultivar from the Group which bears the same epithet, it is that award cultivar which has been used in producing further hybrids.

Reference is sometimes made under parentage — and elsewhere — to collectors’ numbers, the distinctive set of initials and numbers used by collectors to distinguish individual accessions of seeds or plants made in the wild (e.g. L&S114, a Frank Ludlow and George Sherriff collection made on their 1934 expedition to Bhutan & SE Tibet). Details of such collections are to be found in *The Rhododendron Handbook 1998* (RHS, 1997).

(f) Roles. A record is given of the names of those concerned in the various roles involved in the development and recording of each plant. These are distinguished by the following letters (given in the order in which they are cited in the text).

- **R** = raised by ... (used in many earlier records and generally assumed to include what would now be distinguished as H & G.)
- **H** = hybridised by ... (when a plant is indicated to be the result of an open-pollination the role letter “H” is still employed and in such cases it should be understood that the cross took place whilst the plant was in the possession of the individual or firm named, who will also have collected the seed.)
- **G** = grown to first flower by ...  
- **S** = selected by ...  
- **N** = named by ...  
- **I** = introduced by ...  
- **INC** = incorporated into records at the time of publication of the first Register (1958). Any name known to have been in use prior to 1958 is treated in this way irrespective of whether it was actually listed in the 1958 Register.
- **REG** = registered by ...

In some cases the only information available is that the plant was listed by a particular nursery or another source. Such cases are given as “L” = listed by ... (the source will either be given in the list of names and addresses on pp1492–1543 or in the bibliography on p.1544).

As was the custom in the past many plants raised on large estates are credited to the owner of that estate. It should be recognised however that in many of these situations there would have been an influential (head) gardener who did much (or all) of the work concerned. Today such individuals would get the direct credit they deserve. Wherever possible in this Register & Checklist mention is made in the list of names and addresses at the back of the Register of the key gardeners involved.

(g) Description. The descriptions vary widely in length depending on the information that is available. Plants which have been registered recently may often have lengthy accounts and this detail can be of considerable value in determining identity and distinctness. On the other hand for some early cultivars no descriptive data may be available.

On occasions where sources differ in descriptive detail, or where the origin of the information is other than from the raiser, the sources may be given in parenthesis.

(i) Measurements. All measurements are in metric units and where combined length/breadth measurements of parts of a plant are given length is always given first e.g. Fls 55 x 60mm indicates that the individual flowers are 55mm long and 60mm broad. Overall plant height/width is given with height before width e.g. Shrub 1.5 x 2.0m indicates a plant 1.5m tall and 2.0m wide.

Corolla length should be the length from the base of the tube to the tip of the longest lobe measured along the flattened surface of the corolla.

(ii) Colour. When no Colour Chart was employed colour names follow those used by the registrant or other source.

References to three Colour Charts will be found within the text and can be identified by the distinctive format of the colour references as follows:

  - e.g. 187B
- Horticultural Colour Chart (1942)
  - e.g. 403/3
- Nickerson Colour Fan (1957)
  - e.g. 2.5RP 9/5

When it has been possible to do so consistently within an entry colours formerly listed using the HCC have been converted to those of the RHS Colour Chart, using the Table of Cross-References provided with the 1966 edition. Colour names for references to the RHS Colour Chart are those employed by R.D. Huse & K.L. Kelly in *A contribution toward standardization of color names* (ed. D.H. Voss and published by the American Rhododendron Society in 1984). Although every effort was made to ensure that the relevant colours in the four editions of the RHS Colour Chart matched each other some discrepancies have been noted. If required the ICRA can sometimes supply details of the edition used in an individual entry should this be of critical importance.

(iii) Flowering time will usually be as given by the registrant and relates to the place of origin. Times relate to the Northern Hemisphere unless indicated to the contrary.
(h) **Awards.** Awards made to rhododendron and azalea cultivars by the Royal Horticultural Society are included in the Register and Checklist. The following abbreviations are used:
- FCC = First Class Certificate
- AM = Award of Merit
- SCC = Second Class Certificate (discontinued)
- PC = Certificate of Preliminary Commendation
- HC = Highly Commended (discontinued)
- C = Commended (discontinued)
- * = award made after Trial

The Society also gives an Award of Garden Merit – AGM – for plants of ‘outstanding excellence for ordinary garden decoration or use’. The award was re-instituted in 1992 at which time all previous AGMs were rescinded. The award is now subject to regular review at which times names may be added to or deleted from the list. These awards are not given here but updated lists may be found in a regularly published AGM listing by the Society and on its website.

(i) **Synonyms.** Synonyms are given after any awards and are cross-referenced. Also included here are any relevant breeders’ codes or other references which may have gained some more general use before the plant was named: although there are exceptions these are not generally to be treated as epithets.

(j) **Informal Groupings.** In the 1958 Register most azalea cultivars were allocated to informal groupings based on their parentage, raiser or a combination of the two. These have been repeated in the relevant entries in this Register and Checklist, but no systematic attempt has been made to allocate later entries to these groupings or to recognise new ones. These groupings and many more can be found listed in F.C. Galle’s *Azaleas* (1987), where their origin and characteristics are described. Those employed in this Register and Checklist for azaleas include:

<table>
<thead>
<tr>
<th>Deciduous azaleas</th>
<th>Evergreen azaleas</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ghent</td>
<td>Amoena</td>
</tr>

</tr>
<tr>

<td>Wada</td>
</tr>
<tr>

</tr>
</tbody>
</table>

Tsutsuji is recorded from Ito (1692) as a grouping for azaleas other than Satsuki.

One informal grouping of rhododendrons is used: the Hardy Hybrids, being a popular designation for a range of very hardy, floriferous plants tolerant of exposure and sun and found in a wide range of colouring.

None of the informal groupings mentioned above are treated here as Groups under the terms of the *International Code of Nomenclature for Cultivated Plants*.

(k) **Parenthesised notes.** An entry may finish with various relevant entries within a parenthesised note. These may include references to:
- (i) The original place of publication where the name was first established
- (ii) The nature and location of any Standard specimen. (Note: Now, under the 2004 Code, to be styled as a nomenclatural standard.)
- (iv) Further details on origin
- (v) The name of the formal Group to which a cultivar belongs
- (v) Other relevant comments

Cross references from a synonym entry to the accepted name are also listed in these notes.

**Acknowledgements**

In the course of preparation of this Register and Checklist the Society has received much help and advice from a great many individuals. To all those concerned the Society is immensely grateful.

Although it may seem invidious to mention some individuals by name the International Registrar would like, in particular, to pay special tribute to a small international team of volunteers who have read the text as it was produced and not only corrected many errors and inconsistencies, but contributed significant data to augment existing entries and to add new ones. This team consisted of the late John Bond (UK), Michael Cullinane (New Zealand), Albert De Raedt (Belgium), Graeme Eaton (Australia), the late Alan Hardy (UK), Jay Murray (USA), Charles Puddle (UK), Walter Schmalscheidt (Germany) and Yukio Sasaki (Japan). Chris Callard (UK) has also been generous in supplying data on many vireya cultivars.

Their contribution has been of major significance to the success of this Register & Checklist and their patience in awaiting the final outcome has been much appreciated. It should however be clearly understood that any remaining errors, omissions or inconsistencies are the responsibility of the International Registrar.

A special note of thanks is also due to Judy Restall who over a period of many years has transferred the huge volume of data from over 28,000 index cards into electronic format. Her efficient and painstaking work has made the job easier for the rest of us. Robert Hacker has also provided exemplary IT support throughout the project and devised the Access program on which the Register is currently held.

(a) ‘Admiraal de Ruiter’ (Syn. of ‘Admiral de Ruyter’)
(a) ‘Admiraal de Ruyter’ cv. Deciduous azalea: parentage unknown 1; L.van Houtte (1849), INC: ICRA (1958) Fls deep blood red, slightly spotted orange (L. van Houtte, 1871). This description was used quite widely in the second half of the 19th century by van Houtte and others. The name was first substituted for ‘Cardinal’ in van Houtte’s 1849 list where the description (deep rose, edged more red and with a yellow blotch) indeed equates with the earlier description for ‘Cardinal’ (cf. D. Spaec, 1846): this earlier use is treated as a synonym of ‘Cardinal’. It seems likely, however, that van Houtte had two plants under the name ‘Admiraal de Ruyter’ and the apparent later use is recorded here. Syn: ‘Admiral Ruyter’, ‘Admiraal van Ruyter’, ‘Admiraal de Ruyter’

(r) 'Florence Sarah Smith' cv. Elepidote rhododendron: *catuwbienae* hybrid I; James Smith & Sons (pre 1898), INC; ICRA (1958) Fls light pink, with fine red-brown to greenish brown spotting. Shrub to c.1.5m, broader than high. Syn: 'Florence Smith', 'E.S. Smith' (Previously listed incorrectly as 'Florence Smith')

(r) 'Florence Smith' (Syn. of 'Florence Sarah Smith')

(a) 'Florence Waldman' cv. Evergreen azalea: 'Glacier' × 'Eri' (s) × 'Anna Kehr' G; Roslyn Nursery, N: Roslyn Nursery, I: Roslyn Nursery (pre 1992) Fls semi-double and double, hose-in-hose, 75mm wide, white with sand­yellow and with one lobe orange (L. van Houtte, 1849); 'Florentina' may therefore be the correct form of this hybrid

(a) 'Florentine' cv. Deciduous azalea: parentage unknown I: L. van Houtte (pre 1849), INC; ICRA (1958) Fls single, rose, midveins white and isabelline yellow and with one lobe orange (L. van Houtte, 1849); van Houtte later described it as light nankeen yellow, slightly shaded salmon and spotted with ochre yellow. Ghent ('Floretina', listed by L. Verschaffelt (1846) is assumed to be the same plant and had the same description as given by van Houtte (1849) under 'Florentine; 'Florentina' may therefore be the correct form of this epithet

(a) 'Flore Pleno' cv. Deciduous azalea: parentage unknown I: L. C. Loddiges & Sons (1804), INC; ICRA (1958). Ghent (Listed as 'Nudiflora Flore Pleno')

Gartrell (1985) Fis single, 12/ball truss, open funnel-shaped, 40 × 110mm wide, with 5 wavy-edged lobes, buds tinted red, opening near brilliant yellow green (2.5GY 9/8), with 10mm blotch of moderate red (2.5R 4/10) deep in dorsal lobe sector. Calyx irregular, 5-10mm long, reddish green. Lvs broadly elliptic, 100 × 60mm, moderate olive green (2.5GY 4/3), hairless. Shrub 2.4 × 2.2m in 22 years. Mid May

(a) ‘Gretchen’ cv. Evergreen azalea: complex hybrid R: W.D. Smith (pre 1987), N: W.D. Smith Fis 75mm wide, strong reddish orange, with a vivid red (45B) blotch. Shrub 1.1m in 8 years

(a) ‘Gretchen Kellas’ cv. Evergreen azalea: seedling from ‘Sweetheart Supreme’ R: D.J. Cole (pre 1987), N: D.J. Cole Fis 65mm wide, reddish purple, with a darker blotch. Mid April

(r) ‘Gretchen Medlar’ cv. Elepidote rhododendron: ‘Boule de Neige’ s × ‘Henrietta Sargent’ H: C.H. Phetteplace (1935), G: C.H. Phetteplace (1960), N: C.H. Phetteplace, REG: C.H. Phetteplace (1976) Fis 12ball truss, open funnel-shaped, 40 × 110mm wide, with 5 wavy-edged lobes, buds tinted red, opening near brilliant yellow green (2.5GY 9/8), with 10mm blotch of moderate red (2.5R 4/10) deep in dorsal lobe sector. Calyx irregular, 5-10mm long, reddish green. Lvs broadly elliptic, 100 × 60mm, moderate olive green (2.5GY 4/3), hairless. Shrub 2.4 × 2.2m in 22 years. Mid May

(a) ‘Gretchen Kellas’ cv. Evergreen azalea: parentage unknown R: Lord Aberconway, N: Lord Aberconway, 1 Lord Aberconway, INC: ICRA (1958) Fis 65/x 75mm, strong reddish orange, with a vivid red (45B) blotch. Shrub 1.1m in 8 years

(r) ‘Gretchen’ cv. Elepidote rhododendron: decorum × griffithianum s × ‘Kettledrum’ H: G.G. Nearing (pre 1947), I: J.B. Gable, INC: ICRA (1958) Fis in a large domed truss, pink, with a red throat. Shrub up to 2.0m

(r) ‘Gretchen Gossler’ cv. Elepidote rhododendron: Idealist Group s × ‘Crest’ H: C.H. Phetteplace (1953), G: C.H. Phetteplace (1960), N: C.H. Phetteplace, REG: C.H. Phetteplace (1976) Fis 12ball truss, open funnel-shaped, 40 × 110mm wide, with 5 wavy-edged lobes, buds tinted red, opening near brilliant yellow green (2.5GY 9/8), with 10mm blotch of moderate red (2.5R 4/10) deep in dorsal lobe sector. Calyx irregular, 5-10mm long, reddish green. Lvs broadly elliptic, 100 × 60mm, moderate olive green (2.5GY 4/3), hairless. Shrub 2.4 × 2.2m in 22 years. Mid May

(r) ‘Gretry’ cv. Parentage unknown R: J. Byls (pre 1864), N: J. Byls, INC: ICRA (1958) FIs rose, with a large white blotch. Hardy Hybrid (May be the plant listed by C. Noble (1862) with dark rosy purple flowers)

(r) **Gretzel** cv. Elepidote rhododendron: *bureavii* × Fabia Group R: H. Lem (pre 1960), N: H. Lem FIs pastel pink to shell pink, with salmon orange margins. Calyx about half the length of corolla, coloured as corolla. Lvs dark green with an attractive indumentum. Shrub 10.0m in 10 years. (Sometimes miss-spelt ‘Gretsel’)

(r) **Griercalyx** group gp *griersianum* (s) × *megacalyx* R: unknown (pre 1941), INC: ICRA (1958) (A rare example of a successful lepidote × elepidote hybrid)

(r) **Grierdal Group** gp *griersianum* (s) × *dalhoussieae* R: A.W. Heneage-Vivian, N: A.W. Heneage-Vivian, I: A.W. Heneage-Vivian (1937), INC: ICRA (1958) Fls 4-5/truss, pendulous, tubular, 90 × 80mm, scarlet, tinged magenta. Calyx red, lobes 10mm long, scaly and hairy. Lvs dull green, with hairs and scales. (A rare example of a successful lepidote × elepidote hybrid)

(r) ‘Griepont’ cv. Elepidote rhododendron: *griersianum* × *ponticum* R: unknown (pre 1995) Fls 14/round-ed truss, 75mm wide, fuchsia purple, lighter in the centre, with an orange dorsal flare and prominent red filaments. Lvs 100 × 40mm, pointed, recurved, heavy-textured, deeply veined, sage green. Shrub under 1.8m long. May. AM 1945 (Grosclaude Group)

(r) **Griever Group** gp Lepidote rhododendron: *virgatum* (s) × *cilatum* R: unknown, INC: ICRA (1958)

(r) ‘Grisewoodianum’ cv. Parentage unknown L: W. Rollisson & Sons (1877), INC: ICRA (1958) FIs white, with purplish crimson spots. Hardy Hybrid

(r) ‘Gristede’ cv. Lepidote rhododendron: *rusatum* hybrid R: J. Bruns Nursery, N: J. Bruns Nursery, I: J. Bruns Nursery (1961) Fls 2-7/ball truss, funnel-shaped, 20-35mm wide, light violet (88C). Lvs narrowly elliptic, glossy, dark green, aromatic. Compact shrub, 0.8 × 1.6m. (Has sometimes been listed as an impeditum hybrid)

(a) ‘Griswoodii’ (See note under ‘Grieswoodianum’)

(r) ‘Grosclaude’ cv. Elepidote rhododendron: *haematodes* (s) × *facetum* R: L. de Rothschild, N: L. de Rothschild, I: L. de Rothschild (1941), INC: ICRA (1958) Fls 6-12/lax truss, slightly pendulous, campanulate, 50-55 × 60-65mm, with slightly wavy-edged lobes, blood red (820/1), speckled brown in the throat. Calyx lobes up to 30mm long, coloured as corolla. Lvs obovate-lanceolate, up to 110 × 40mm, matt dark green above, with a thick, brown indumentum below. Shrub to at least 2.0m. May. AM 1945 (Grosclaude Group)
(r) **Grosclaude Group** gp Epilobite rhododendron: *haematodes* (s) × *facetum* R; L. de Rothschild, N; L. de Rothschild, L; L. de Rothschild (1941), INC: ICRA (1958)

(a) ‘Grossfiirstin Helene’ cv. Evergreen azalea: parentage unknown R; Schutz, N; Schutz, L; Schutz (1863), INC: ICRA (1958) Fls orange, with a rose tinge and a black blotch tinged dark red. Indian

(a) ‘Grossherzoig Ludwig von Hessen’ cv. Evergreen azalea: parentage unknown R; J. Rose (1895), INC: ICRA (1958) Fls double, pure bright vermilion red. Indian (Presumably the same plant listed by C. Vuylsteke, 1890)

(a) ‘Ground Hog’ cv. Evergreen azalea: (*yedoense* var. *pouknhanese* × *Vuyk’s Scarlet*), open-pollinated G; Weston Nurseries (c 1981), S; E.V. Mezitz, N; R.W. Mezitz, L; Weston Nurseries (1996), REF: R.W. Mezitz (1999) Fls 3–4/flat domed truss, broadly funnel-shaped, c40 × 50mm, with 5 wavy-edged lobes, vivid purplish red (67B), with a large, burgundy coloured, speckled dorsal blotch. Calyx 6mm long, green. Lvs elliptic, 25 × 13mm, flat, acute at apex, cuneate at base, glossy green. Shrub 0.3 × 0.9m in 7 years. Mid May

(r) ‘Grove City’ cv. Epilobite rhododendron: *F4* deriv. of ‘Newport’ H; W.E. Delp (1960), G; W.E. Delp, N; Mrs V. Delp (1995), L; Crystalaria Rhododendron Naturescapes (1997), REF: J.D. Harris (1996) Fls 18/truss, open funnel-shaped, c50 × 80mm, with 5 wavy-edged lobes, deep and strong purplish red (71A-C) in bud, opening strong and deep reddish purple (72B, 77A) together with strong and light purple (77B-C), with a white flare and light olive (152A) dorsal spots; filaments and style deep purplish red (61A); anthers pale yellow (161D); stigma dark red (187B). Lvs 95 × 45mm, broadly acute at apex, cuneate at base. Shrub 1.8 × 1.8m in 15 years. Early June

(r) ‘Grumpy’ cv. Epilobite rhododendron: *yakushima* × unknown hybrid R; Waterer (Bagshot), N; Waterer (Bagshot), REF: Waterer (Bagshot) (1970) Fls 11/globular, lax truss, funnel-shaped, 45 × 50mm, cream, slightly tinged pale purplish pink (55D) at edges and with light orange-yellow (22B) spotting on dorsal lobe. Lvs 80 × 30mm, dull dark green. Compact shrub to at least c0.7m. *AM 1979*

(a) ‘Grussendorf’ cv. Evergreen azalea: ‘Erich Danneberg’ × ‘Easter Greetings’ R; O. Stahnke, N; O. Stahnke (1968) Fls double, vivid purplish red (57C) to deep purplish pink (61C-D). Calyx normal, green. Indian

(r) ‘Guardian Fir’ cv. Epilobite rhododendron: Albatross Group × *fortunei* subs. *discolor* × Tally Ho Group H; H. Lem (1955), G; M.K. & Mrs F. Butler, N; M.K. & Mrs F. Butler; L; M.K. & Mrs F. Butler (1971), REF: M.K. & Mrs F. Butler (1974) Fls 8-10/globular, ball truss, broadly funnel-shaped, 45 × 115-125mm, moderate pink shading to light yellowish pink on dorsal lobes, with a small red blotch and brownish speckling. Calyx 7mm long, deep pink. Lvs narrowly oblong to slightly obovate, 175 × 40mm, dull mid green to dark green above. Shrub 2.5 × 2.5m in 20 years. Mid-late June

(r) **Guardsman Group** gp Epilobite rhododendron: ‘Ivery’s Scarlet’ (s) × *arboreum* R; Sir Giles Loder, N; Sir Giles Loder (c 1950), INC: ICRA (1958) Fls dark red in a typical *arboreum*-shaped truss. Upright shrub. Early

(r) ‘Gudrun’ cv. ‘Eggebrechtii’ (s) × ‘Madame Linden’ R; T.J.R. Seidel (1905), INC: ICRA (1958) Fls white, with a slight purple tint and strong brown-red spotting. Shrub to c2.0m with decorative brown buds

(a) ‘Guerder Rose’ cv. Deciduous azalea: parentage unknown R; L. van Houtte (1871), INC: ICRA (1958)
Fls soft yellow, flushed rosy apricot, with a deep chrome yellow blotch darker at the centre; pales with age to ivory and yellow (Sunningdale, 1961); fls in very large, round trusses, bright orange, with a chrome yellow blotch (L. van Houtte, 1871). Ghent

(r) ‘Guépier’ cv. Elpidiote rhododendron: selection from Merops Group N: C. Ingram (1961), L: C. Ingram, REG: C. Ingram (1961) Fls 17/small, rounded truss, shallowly campanulate, 40 × 50mm, chartreuse green (663/3), with a vestige of darker shading on the dorsal lobe. Calyx rim-like. Lvs 115 × 45mm, with conspicuously wavy margins; petioles 30mm long. AM 1961

(r) ‘Guercino’ cv. Parentage unknown R: unknown (pre 1865), INC: ICRA (1958) Fls vivid scarlet rose. (Exhibited by Waterer (Bagshot) in 1865; probably the ‘Guercino’ listed by C. Vuylsteke in 1890 (crimson, beautifully marked))

(a) ‘Guerdon’ cv. Evergreen azalea: ‘Lilacineum’ × ‘Willy’ (s) X ‘Mrs Carmichael’ × ‘Willy’ R: B.Y. Morrison, N: B.Y. Morrison, I: USDA (1948), INC: ICRA (1958) Fls 1-3/truss, 65-75mm wide, often 6-lobed, light mallow purple (near light reddish purple (74C)), with a tyrian rose blotch and an orange tube. Low, spreading shrub to 0.6m. Mid-late May. Glenn Dale

(a) ‘Guido Gezelle’ cv. Evergreen azalea: ‘Pink Pearl’ × ‘Armand Haerens’ I: C.J. Wille & Co. (1933), INC: ICRA (1958) Fls double, strong pink (52D) to light purplish pink (55C). Calyx normal, green. Late. Indian (‘Pink Pearl’ refers here, presumably, to ‘Haerewille Pink Pearl’)

(a) ‘Guilems Primus’ (See note under ‘Guillaume 1er’) (r) ‘Guilford’ cv. Elpidiote rhododendron: parentage unknown H: unknown (pre 1978), G: W.D. Tietjen, N: W.D. Tietjen, REG: W.D. Tietjen (1991) Fls 15/conical truss, open funnel-shaped, 60 × 75mm, with 6 smooth-edged lobes, pale purplish pink (55D) with strong purplish pink (55B) margins; moderately scented. Lvs obovate, 160 × 75mm, flat, mucronate at apex, rounded at base, hairless. Shrub 1.7 × 1.7m in 10 years, of upright, spreading habit. Late May

(a) ‘Guillaume II’ cv. Deciduous azalea: parentage unknown I: L. van Houtte (pre 1849), INC: ICRA (1958) Fls single, bright orange, spotted very deep orange and with white tips (L. van Houtte cat., 1868); other sources have quoted orange-yellow, shaded salmon rose (1958 Register) or striped with 3 colours (L. de Cock cat., 1868). More than one plant probably involved. Ghent

(a) ‘Guillaume III’ cv. Deciduous azalea: parentage unknown I: J. Baumann (1860), INC: ICRA (1958) Descriptions vary: orange, with a very dark orange blotch and white tips (C. Vuylsteke, 1884); dark purple, striped white (C. van Geert, 1877). Ghent (Perhaps the same as ‘Willem III’; probably the plant listed by C. Noble, 1855)

(a) ‘Guillaume 1er’ cv. Deciduous azalea: parentage unknown I: L. van Houtte (1849), INC: ICRA (1958). Ghent (Probably the plant listed as ‘Guilemsimus Primus’ (L. Leroy cat., 1868), ‘Guilemsimus Primus’ (Waterer (Bagshot), 1865, Whitley & Osborn, 1850 and ‘Guilemelmus Primus’ (J. Verleeuw, 1835): the last may be the correct form of the epithet)

(a) ‘Guillaume 1er’ cv. Evergreen azalea: parentage unknown R: unknown (pre 1853), N: unknown, INC: ICRA (1958)

(a) ‘Guillielmus Primus’ (See note under ‘Guillaume 1er’) (r) ‘Guioletto’ cv. Elpidiote rhododendron: arboreum hybrid R: J. Rinz (pre 1864), N: J. Rinz, INC: ICRA (1958) Fls dark crimson, strongly spotted on all lobes

(a) ‘GulfRay’ cv. Evergreen azalea: parentage unknown S: R. Dean (1980), N: A.J. Laiche, REG: A.J. Laiche (1993) Fls 2-3/truss, open funnel-shaped, 35-70 × 60-75mm, with 5 smooth-edged lobes, strong pink (54C) with strong red (47B) spotting on dorsal lobe and parts of adjacent lobes; stamens 10. Calyx 0.5-1.8mm long, green. Pedicels 4-10mm long, green. Lvs lanceolate, elliptic or oblanceolate, 20-80 × 10-23mm, acute to broadly acute at apex, cuneate at base, matt green to brownish green and hairy above, with discrete hairs below, hairs white on young growth, later brown; petioles 1-6mm long, green, hairy. Shrub prostrate, 0.3 × 1.2m in just over 2 years. Mid March–early April
(a) ‘Guliemus Primus’ (See note under ‘Guillaume 1er’)

(r) ‘Gulliver’ cv. Elepidote rhododendron: adenoxyum
(s) X ‘Mardi Gras’ H: H. Hachmann (1985), G: H. Hachmann (1990), N: H. Hachmann (1992), L: H. Hachmann (1998), REG: G. Stück (1999) Fls 13/rather lax truss, funnel-campanulate, 45 x 54mm, with 5 slightly wavy-edged lobes, pale rose pink in bud, inside opening white; outside white striped strong purplish red (64C) which fades to white; with more-or-less purple markings inside; stamens 10, filaments greenish white, anthers brownish/moderate orange (166C/D) indumentum. Lvs elliptic, 120 x 30-40mm, acute at apex, usually rounded or cuneate at base, flat, matt green above, with a dense, woolly, moderate orange-yellow (164C) indumentum below. Shrub 0.7 x 1.1m in 10 years. Late April–mid May. (First published in Hachmann cat., 1998–2000 (1998), plus colour photograph)

(r) ‘Gulnare’ cv. Parentage unknown L: Standish & Noble (1853), INC: ICRA (1958) Fls bright rose, tipped darker pink. (The 1958 Register implied it was raised by Rogers (Red Lodge Nursery) but other sources (Laurentius: fls blue, in large trusses) indicate it was from Byls (Ghent))

(r) ‘Gundrop’ (Syn. of ‘Delp’s Gundrop’)

(a) ‘Gumpkins’ cv. Evergreen azalea: parentage unknown R: unknown (pre 1987) Fls pink. Low, compact habit

(a) ‘Gumpo’ cv. Evergreen azalea: selection from eriocarpum R: Japan (pre 1934), N: Japan, INC: ICRA (1958) Fls large, with equal, overlapping, wavy-edged lobes, white, with occasional, small, purplish pink flakes and a light green blotch. Low, dense, slow-growing shrub to c0.3m. AM 1934 Syn: ‘Gunpo’. Satsuki (Probably originated in early 1900s)

(a) ‘Gumpo Lavender’ cv. Evergreen azalea: parentage unknown L: Davidson’s Nurseries (1979) Fls lavender. Shrub up to 0.4m. Satsuki

(a) ‘Gumpo Pink’ cv. Evergreen azalea: parentage unknown R: unknown, N: unknown, INC: ICRA (1958) Fls rose pink, with darker flecks. Syn: ‘Pink Gumpo’, ‘Yugiri’. Satsuki (In Australia two forms are grown under this name, both single: one rose pink, the other pale pink and edged white)

(a) ‘Gumpo Pink and White’ cv. Evergreen azalea: parentage unknown L: Australia (1984) Fls single, some pink, some white, some striped pink and white. Satsuki

(a) ‘Gumpo Red’ cv. Evergreen azalea: parentage unknown L: K. Wada (1937), INC: ICRA (1958) Fls single, with wavy-edged lobes, deep rosy salmon pink. Shrub 0.3m. Syn: ‘Red Gumpo’. Satsuki (Whether ‘Red Gumpo’ or ‘Gumpo Red’ has priority is uncertain; for the sake of consistency the latter is adopted here until contrary evidence is provided)

(a) ‘Gumpo Roseum’ (Syn. of ‘Gumpo Fancy’)

(a) ‘Gumpo Salmon’ cv. Evergreen azalea: parentage unknown L: Camellia Lodge Nursery (1967) Fls single, with wavy-edged lobes, salmon pink

(a) ‘Gumpo White’ cv. Evergreen azalea: parentage unknown R: unknown, INC: ICRA (1958) Fls single, with wavy-edged lobes, white, with occasional pink flecks. Shrub 0.3m. Syn: ‘White Gumpo’. Satsuki (Whether ‘White Gumpo’ or ‘Gumpo White’ has priority is uncertain; for the sake of consistency the latter is adopted here until contrary evidence is provided. May be the same plant as ‘Gumpo’)

(a) ‘Gunbi’ cv. Evergreen azalea: sport from ‘Gumpo’ L: Chugai Nursery Co. (pre 1938), INC: ICRA (1958) Fls single, 65-75mm wide, with wavy-edged lobes, white, with purplish red flecks, stripes or tips and also some white, with a purplish red blotch. Low, spreading habit. Very late. Satsuki ( Said to be the same as ‘Gunrei’)

(a) ‘Gunbo-nishiki’ cv. Evergreen azalea: parentage unknown R: Japan (pre 1976), N: Japan Fls 65-75mm
wide, with wavy-edged lobes, white, variably striped, sectored and marginated strong purplish pink; some light pink with a white margin. Lvs ovate, 30-40mm long

(r) ‘Gundula’ cv. Elepidote rhododendron: ‘Hyperion’ (Knap Hill) (s) × ‘Herme’ H: H. Hachmann (1980), G: H. Hachmann (1986), N: H. Hachmann (1992), L: H. Hachmann (1993), REG: G. Stick (1994) Fls 14-18(-21), fairly compact truss, broadly funnel-shaped, 40-45 × 75-82mm, with 5 wavy-edged lobes, ground colour very pale purple (76C) inside and out, midveins and throat very pale purple (76D), edges light purple (to very light purple) (76A(-B)); dorsal lobe with a conspicuous blotch of dark red (187A) often extending onto adjacent lobes (187C/D); filaments conspicuously long, white, slightly tinged pale purplish pink (62D), anthers moderate to pale orange-yellow (165C/D); style pale purplish pink (62D), stigma deep red (185A). Calyx 3-5mm long, brilliant to light yellow-green (150C/D). Lvs broadly elliptic, 95-135 × 35-55mm, slightly wavy-edged, cuneate at base, acute at apex, glossy dark green with a pale green midvein above, hairless. Shrub 1.4 × 1.6m in 10 years. Late May-mid June. (Published in Hachmann cat., 1993/94)

(r) ‘Gung Ho’ cv. Elepidote rhododendron: ‘Scott David’ (s) × ‘Double Faced’ H: W.E. Delp (1974), G: W.E. Delp, N: Mrs V. Delp, REG: W.E. Delp (1993) Fls 16/truss, open funnel-shaped, with some petaloid stamens, 41 × 51mm, outer corolla 5-lobed, shades of vivid and strong reddish purple (74B, 78A, B) in bud, opening to a blend of very pale purple (75D), strong reddish purple (78B), light purple (78C) and moderate purplish pink (78D), with a deep purplish red (61A) and moderate red (180A, B) throat; filaments and style white; anthers yellowish white (158D); stigma moderate olive pink. Low, spreading habit. Very late.

(a) ‘Gunjo’ cv. Evergreen azalea: parentage unknown R: Japan (pre 1987), N: Japan Fls 50mm wide, red, with darker spots in the blotch. Satsuki

(a) ‘Gunki’ cv. Evergreen azalea: parentage unknown R: Japan (pre 1978), N: Japan Fls single, up to 30mm wide, with wavy-edged lobes, white, with deep purplish red (7.5RP 6/12) stripes on dorsal lobes. Kurume

(a) ‘Gunrei’ cv. Evergreen azalea: parentage unknown H: Chugai Nursery Co. (pre 1938), INC: ICRA (1958) Fls single, 55mm wide, with wavy-edged overlapping lobes, white, flushed rose madder (23/2) with occasional stripes of same colour. Low, spreading habit. Very late. Satsuki (Probably the same as ‘Ginrei’ and ‘Gunbi’)

(r) ‘Gustav Lüttings’ cv. Elepidote rhododendron: ‘Mrs Lindsay Smith’ × *williamsianum* R: D.G. Hobbie (pre 1945), I: D.G. Hobbie (1971) Fls campanulate, white, outside tinted pale pinkish lilac, especially on the margin. Shrub up to 2.0m

(a) ‘Gusty Cole’ cv. Evergreen azalea: seedling from ‘Sweetheart Supreme’ R; D.J. Cole (pre 1987), N; D.J. Cole. Fls hose-in-hose, 40mm wide, purplish pink. Late April

(r) ‘Guttatum’ cv. Parentage unknown L; Standish & Noble (1847), INC; ICRA (1958) Fls creamy white or blush, spotted with green and red. (Probably a ponticum selection/hybrid as indicated by Whitley & Osborn (cat.1850) & L.Jacob-Makoy; the latter claimed it as theirs; other sources suggest it came from Rogers of Red Lodge Nursery. More than one plant may be involved)

(r) ‘Guttatum Colorans’ cv. Parentage unknown L; R. Veitch & Son (1867), INC; ICRA (1958) Fls lilac, spotted

(r) ‘Guttatum Pictum’ cv. Parentage unknown L; R. Veitch & Son (1867), INC; ICRA (1958) Fls snowy white, with black spots

(r) ‘Guy Bradour’ cv. Elepidote rhododendron: ‘Mrs Charles S. Sargent’ X ‘Purple Splendour’ H; H.R. Yates (1963), G; H.R. Yates (1971), N; Mrs M. Yates, I; Mrs M. Yates (1975), REG; Mrs M. Yates (1976) Fls 10ball truss, broadly funnel-shaped, 50 × 90mm, with 5 wavy-edged lobes, strong purple (80B), with a large, black, dorsal blotch and peripheral spotting. Calyx 7mm long, light yellow-green (145C). Lvs elliptic, 115 × 50mm, moderate yellow-green (147B), hairless. Shrub 0.8 × 1.0m in 11 years. Late May

(r) ‘Guyens’s Aphrodite’ cv. Elepidote rhododendron: ‘Guyens’s Super Nova’ (s) X ‘Golden Melodie’ H; H.J.A. Guyens (1994), G; H.J.A. Guyens (2000), N; H.J.A. Guyens (2001), I; H.J.A. Guyens, REG; H.J.A. Guyens (2001) Fls 14-19/tight, globular truss, funnel-shaped, 90 × 100mm, with 6-7 slightly wavy-edged lobes, green in bud, opening inside very soft pink cream, outside pastel pink; dorsal lobes with olive green spots on a yellow ground. Calyx 30-55mm long, coloured as corolla. Lvs elliptic, 85-125 × 25-40mm, margins flat to slightly wavy, almost acute at apex, acute at base, slightly glossy above, with some white hairs when young. Shrub 0.55 × 0.55m in 7 years. Late April-mid May

(r) ‘Guyens’s Apricot Queen’ cv. Elepidote rhododendron: ‘Souvenir of Anthony Waterer’ F2 (s) X ‘Ehrengold’ H; H.J.A. Guyens (1985), G; H.J.A. Guyens (1991), N; H.J.A. Guyens (1999), I; H.J.A. Guyens, REG; H.J.A. Guyens (2000) Fls 14-20/spherical truss, funnel-shaped, 55-65 × 65-70mm, with 5 flat-edged lobes, light green in bud, opening apricot inside, apricot with salmon brown stripes outside; becoming more yellow with age; dorsal lobe with numerous reddish brown spots; pistil and filaments red. Lvs ovate, 85-125 × 35-55mm, broadly rounded at apex, narrowly rounded at base, margins flat or partly upcurved, slightly glossy above, hairless. Shrub 1.2 × 1.2m in 8 years. Late April-mid May
